

# CONNECTING INVESTMENT + CUSTOMERS

## Stolle Mandrel Cells

Stolle is investing a tremendous amount of time and money to ensure that the parts that make up our machines – and the spares that keep them running – are made to our exacting specifications from the best materials. Increasingly, we are vertically integrating the fabrication of these critical components in-house, utilizing the latest machinery and techniques to produce the highest quality parts at the best price. Dedicating an employee per shift to work in a specific part machining and assembly cell

ensures consistency and uses their skills and experience to the greatest benefit. Our focus on self-manufacturing produces parts that are more reliable, consistent and can be scheduled to meet demand without relying on outside suppliers.

Contact us today and connect to the future of canmaking.
